## ProCare Software Pricing: Which Version is Best For You?

**Professional Solutions** offers two versions of ProCare to meet the individual needs of any child care or daycare center. Based upon the enrollment of your child care center, you can select the software that best suits your management and budget needs. Large, small or in-between, ProCare provides you with the very best child care software solution.

**ProCare:** For single or multiple site\* centers. Accommodates an unlimited number of families and employees.

**Mini ProCare:** For single site centers with a maximum of 60 families per year.

### Maximize Your Return on Investment

Use our [ROI Calculator](#) to find out how quickly an investment in ProCare pays for itself!

**ProCare** (For single or multiple site\* centers. Unlimited number of families and employees.)

ProCare Software is a complete management system designed expressly for child care and daycare centers. This easy to use, flexible system offers numerous components that address both child care accounting needs and daycare management functions. Unlike general accounting software, ProCare is able to meet a multitude of specialized child care business needs from the individual daycare center to child care center corporations operating hundreds of locations. Use the built in database back-up feature of ProCare along with an optional FTP add-on module to transfer files from individual child care centers to the corporate office. With the [ProCare FTP Manager](#) sharing information has never been easier!

**Mini ProCare** (For single site centers with a maximum of 60 families per year.)

The Mini version offers the same features and benefits as the regular version but limits the number of families and employees stored in the database. This system is for daycare centers that have 60 families or less per year with most modules priced at 50% below regular ProCare pricing.

If you later find the need to expand the database beyond the 60 family limit, the system may be upgraded to the unlimited version for the 50% investment difference. Data re-entry is not required when upgrading from one version to another.

### Software Products
